CORE SKILLS

- Distributed systems, monitoring, storage platforms, and microservices
- Go, Python, Bash, Linux
- gRPC, REST, S3
- Kubernetes, Docker, GitHub Actions
- Prometheus, Grafana, ELK, PostgreSQL, Redis
- Architecture reviews, mentoring, code reviews, CI/CD

EDUCATION

Master of Computer Applications (MCA), Part-time

Manipal University

Post Graduate Diploma in Advanced Software Development

C-DAC

Bachelor of Science in Mathematics, Computer Science, and Statistics

Nagpur University, 2004

SUMMARY

Lead software engineer with 18+ years of experience building distributed systems, cloud-native platforms, and enterprise storage infrastructure. Strong in Go, Python, Linux, control-plane architecture, APIs, platform reliability, technical leadership, and AI platform initiatives.

HIGHLIGHTS

- Lead engineer for DDN RED, a multi-tenant distributed storage platform supporting customer environments totaling roughly 1,000 nodes across four clusters.
- Architected control-plane services, APIs, and CLI tooling for cluster lifecycle management, configuration, and monitoring.
- Drove architecture discussions, PR reviews, stand-ups, and engineering execution across control plane, gateways, and monitoring subsystems.
- Built CI/CD, observability, automated testing, and deployment workflows across Kubernetes, GitHub Actions, Prometheus, Grafana, and ELK.
- Led control-plane UI engineering across React, Angular, and Go/TUI, including Infinia Console, Infinia UI, and Clifana for real-time monitoring visibility.
- Contributed to organizational skill management and skill policy compliance for AI development initiatives alongside core platform engineering.

EXPERIENCE

- Lead engineering for DDN RED, a multi-tenant distributed storage platform deployed in customer environments totaling roughly 1,000 nodes across four clusters.
- Architect control-plane services in Go and gRPC, plus `redapi` and `redcli`, for cluster lifecycle management, configuration, and monitoring.
- Delivered cluster initialization, device management, and deployment workflows for complex environments across TCP, RDMA, Verbs, and SR-IOV.
- Drove architecture discussions, team execution, stand-ups, PR reviews, and mentoring across control plane, NFS, S3, and monitoring components.
- Built CI/CD, test, observability, and deployment systems using GitHub Actions, Kubernetes, Docker, Prometheus, Grafana, and ELK.
- Led modern control-plane UI work spanning React, Angular, and Go/TUI, including a React replacement for a legacy Angular UI, a zoneless Angular architecture, and a terminal Prometheus dashboard for real-time operations monitoring.
- Contributed to organizational skill management and skill policy compliance for AI development initiatives.

Earlier Experience

- DDN - Senior Development Engineer: Built monitoring, telemetry, analytics, and log visibility platforms using Cassandra, InfluxDB, ELK, and TensorFlow.
- Tieto India - Senior Development Engineer: Contributed to core banking software with focus on backend design, performance, scalability, and reliability.
- Calsoft Pvt. Ltd. - Principal Development Engineer: Worked on storage management, OpenStack, and Linux-based platform components.
- Earlier Roles: Built foundation in backend engineering, systems integration, and enterprise software delivery.
